assumptions of technological ethics There is also a chapter covering all four types of risk as applied to the first US technology recombinant bovine somatotropin The last four chapters take up 1 intellectual property debates 2 religious metaphysical and intrinsic objections to biotechnology 3 issues in risk and trust and 4 a review of ethical issues in synthetic biology gene editing and gene drives the three key technologies that have emerged since the book was last revised

Resistance Is Fertile Wilhelm Peekhaus,2013-03-13 For decades government industry and the mainstream media have extolled the virtues of biotechnology downplaying its negative side effects and claiming that it can improve everything from our health and diet to our environment and economy Focusing on agricultural biotechnology *Resistance Is Fertile* challenges this dominant rhetoric by offering a critical analysis of the role of capital and the state in the development of this technoscience Wilhelm Peekhaus analyzes the major issues around which opponents of agricultural biotechnology in Canada are mobilizing resistance namely the enclosure of the biological commons and the knowledge commons which together form the BioCommons What emerges is an empirically and theoretically informed analysis of topics such as Canada's regulatory regime the corporate control of seeds the intellectual property system and attempts to construct and control public discussions about agricultural biotechnology

This dissertation analyzes how Antarctic scientists and policy makers influence environmental management for the continent. In Antarctic society, scientific expertise and authority as well as conceptions of the Antarctic place must be constantly shaped through policy and practice. I conducted sixteen months of ethnographic fieldwork and interviews in Christchurch, New Zealand, a central site of Antarctic culture, at political and scientific meetings and workshops in New Zealand, Australia, Scotland, and India, and on a research expedition near Scott Base, Antarctica. I examined the lived intricacies of this international environmental space and people's relationship to Antarctic environmental management by mapping, examining, and traveling within the networks that scientists and other Antarctic community members form. Competing claims of nationalism, scientific disciplines, field experiences, and personal relationships in Antarctic environmental management disrupt the idea of a utopian epistemic community, so I focused on what emerges in Antarctica among the complicated and hybrid forms of science, sociality, politics, and national membership found there. This dissertation contains case studies that depict how knowledge-based communities form and have effects in Antarctica. These case studies include: 1) a camping rule that rocks moved by people must be returned to their original location; 2) biosecurity regulations for Antarctic species and non-native species to Antarctica; 3) international negotiations over a special managed area; and 4) the contributions of Antarctic scientists' policy and data to climate change mitigation. These formations and effects take work, not the least of which involves at least tentative agreements of the core ideas of expertise and communities. Antarctic people translate science through the policy system to make environmental management decisions through playful and serious arrangements of policy and practice, humans and nonhuman entities. In particular, policy and practice in these Antarctic expert communities coalesce in the making of procedures, documents, and audiences. In the Antarctic, referring lives and work of human and nonhuman expert community members, this continent of peace, science, and other exceptionalisms is crafted as a technocratic wilderness.
