Principles and Practices of Engineering Hydrology Stacy Keach,2022-09-27 Engineering hydrology is the

applied science of water resources engineering It is concerned with the study of the hydrological cycle like runoff precipitation transpiration estimation of water resources etc It analyzes the problem of floods and drought and aims to formulate preventive measures This field finds its application in planning and management of water resources floods forecasting calculating rainfall determining water balance catchment hydrology creating measures to control erosion and sedimentation and hydropower generation This field focuses on determining water yield from a basin studying the groundwater development and determining the maximum intensity of the storm This book brings forth some of the most innovative concepts and elucidates the unexplored aspects of engineering hydrology From theories to research to practical applications case studies related to all contemporary topics of relevance to this field have been included herein This book is a vital tool for all researching or studying this domain as it gives incredible insights into emerging trends and concepts

Natural and Anthropogenic Disasters M.K. Jha, 2010-07-20 The major challenges of the 21st century faced by human beings are how to achieve water security food security energy security and environmental security Owing to enhanced natural anthropogenic disasters worldwide these challenges become much more complicated and daunting especially for developing countries Therefore it is important to highlight the risk of different disasters as well as the modern tools and techniques for minimizing disaster incidence and losses Disaster management being highly multidisciplinary in nature a comprehensive book dealing with different aspects of disaster management and encompassing important disasters faced by humankind is presently not available This book is an attempt to fulfill this gap It provides clear comprehensive and up to date information about different facets of disaster management along with salient case studies The book highlights the current status of disaster management focusing on developing nations discusses vital issues such as climate change and sustainable development modern approaches and tools techniques and the challenges of and future R D needs for sustainable disaster management

Defence from Floods and Floodplain Management John Gardiner, Odon Starosolszky, V. Yevjevich, 2012-12-06 Defence from Floods and Floodplain Management discusses all aspects of floodplain management related to defence from floods including specific issues such as the maintenance of flood defences and reveals many aspects of a more holistic approach to the management of flood risk expanding the structural non structural debate into prevention and cure in the floodplain and its catchment Recent experience in many countries is recounted by experts from Hungary Austria Greece Italy the Netherlands Portugal the UK and the USA

Flood Handbook Saeid Eslamian, Faezeh Eslamian, 2022-04-10 Floods are difficult to prevent but can be managed in order to reduce their environmental social cultural and economic impacts Flooding poses a serious threat to life and property and therefore it is very important that flood risks be taken into account during any planning process This handbook presents different aspects of flooding in the context of a changing climate and across various geographical locations Written by experts from around the world it examines flooding in various climates and landscapes taking into account environmental ecological hydrological and geomorphic factors and considers urban agricultural
