Mechanics: Statics and Dynamics Francesco Costanzo, Michael Plesha, Gary Gray, 2009-04-16 Plesha Gray and Costanzo's Engineering Mechanics Statics Dynamics presents the fundamental concepts clearly in a modern context using applications and pedagogical devices that connect with today's students. The text features a problem solving methodology that is consistently used throughout all example problems. This methodology helps students lay out the steps necessary to correct problem formulation and explains the steps needed to arrive at correct and realistic solutions. Once students have fully mastered the basic concepts they are taught appropriate use of modern computational tools where applicable. Further reinforcing the text's modern emphasis, the authors have brought engineering design considerations into selected problems where appropriate. This sensitizes students to the fact that engineering problems do not have a single answer and many different routes lead to a correct solution. The first new mainstream text in engineering mechanics in nearly twenty years. Plesha Gray and Costanzo's Engineering Mechanics Statics and Dynamics will help your students learn this important material efficiently and effectively. *Engineering Mechanics* Robert W. Soutas-Little, D. J. Inman, 1999. For courses in Dynamics. State of the art in both perspective and approach, this text puts the motion back into the presentation of dynamics. Drawing on the power and widespread use of modern computational tools e.g. MathCAD, MATLAB, Mathematica and Maple, it is written from the point of view that the systems of interest are in motion and focuses on solving the dynamics problems for general time and plotting and visualizing the response. Text designed to be used in conjunction with a computational software package and an accompanying manual. The manual includes all the examples from the text and key stroke instructions for the applicable tool and allows the student to compute solutions and to visualize physical properties. Explains how to use the software to solve the problems in the text. Features a unique pedagogical approach unlike the standard compute the acceleration at a single time or position approach taken by most other texts. This text treats dynamics as founded on Newton's laws which produce differential equations. Presents the entire motion of particles and rigid bodies through the analytical or numerical solution of those equations.
