

1. Introduction to Networking

Introduction

A network is simply a group of two or more Personal Computers linked together. Many types of networks exist, but the most common types of networks are Local-Area Networks (LANs), and Wide-Area Networks (WANs).

In a LAN, computers are connected together within a "local" area (for example, an office or home). In a WAN, computers are further apart and are connected via telephone/communication lines, radio waves or other means of connection.

How are Networks Categorized?

Networks are usually classified using three properties: Topology, Protocol and Architecture.

Topology specifies the geometric arrangement of the network. Common topologies are a bus, ring and star. You can check out a figure showing the three common types of network topologies [here](#).

Protocol specifies a common set of rules and signals the computers on the network use to communicate. Most networks use Ethernet, but some networks may use IBM's Token Ring protocol.

Architecture refers to one of the two major types of network architecture: Peer-to-peer or client/server. In a Peer-to-Peer networking configuration, there is no server, and computers simply connect with each other in a workgroup to share files, printers and Internet access. This is most commonly found in home configurations and is only practical for workgroups of a dozen or less computers. In a client/server network there is usually an NT Domain Controller, to which all of the computers log on. This server can provide various services, including centrally routed Internet Access, mail (including e-mail), file sharing and printer access, as well as ensuring security across the network. This is most commonly found in corporate configurations, where network security is essential.

Network Topologies

Introduction

Network topologies can take a bit of time to understand when you're all new to this kind of cool stuff, but it's very important to fully understand them as they are key elements to understanding and troubleshooting networks and will help you decide what actions to take when you're faced with network problems.

I will try to be as simple as possible and give some examples you can relate to, so let's get stuck right into this stuff!

The Stuff:

There are two types of topologies: Physical and Logical. The physical topology of a network refers to the layout of cables, computers and other peripherals. Try to imagine yourself in a room with a small network, you can see network cables coming out of

First Sem Mtech Computer Network Lab Manual:

Advanced Communication Skills Laboratory Manual D. Sudha Rani, 2010-09 Advanced Communication Skills Laboratory Manual is the sequel to the acclaimed A Manual for English Language Laboratories and addresses the specific needs of students and teachers in technical and other professional courses. It focuses on reading and writing skills and integrates these with speaking, listening and other intra and inter personal skills. Besides imparting communication and soft skills, the three tier evaluation exercises self evaluation, peer group evaluation and teacher evaluation will identify the students' communication skills and help in developing skill sets. Computer Networks LAB MANUAL (A Complete Lab Experiments with Programmable Solutions) Na Vikraman, 2019-10-04 This course provides students with hands on training regarding the design, troubleshooting, modeling and evaluation of computer networks. In this course, students are going to experiment in a real test bed networking environment and learn about network design and troubleshooting topics and tools such as network addressing, Address Resolution Protocol (ARP), basic troubleshooting tools e.g. ping, ICMP, IP routing e.g. RIP, route discovery e.g. traceroute, TCP and UDP, IP fragmentation and many others. Student will also be introduced to the network modeling and simulation and they will have the opportunity to build some simple networking models using the tool and perform simulations that will help them evaluate their design approaches and expected network performance. **Peterson's Guide to Graduate**

and Professional Programs, an Overview, 1995 *Who's Who in Plastics Polymers, First Edition* James P. Harrington, 2000-05-09 This is the first edition of a unique new plastics industry resource *Who's Who in Plastics Polymers*. It is the only biographical directory of its kind and includes contact, affiliation and background information on more than 3300 individuals who are active leaders in this industry and related organizations. The biographical directory is in alphabetical order by individual name. After each individual name, current affiliation and contact information is provided. This includes job title, full name of affiliation e.g. business, university, association, research institute, business address and electronic contacts, telephone, fax, e-mail and Web site. Home addresses and contacts are also provided for most of the entries. In the biographical summary section for each individual, the following information is provided: date and place of birth, education and educational achievements, work experience including company or other organization names, positions held and time periods. Also included in this section are the number of patents awarded, articles and book chapters authored and conference sessions chaired. Other information includes titles of books edited or written by the individual, listing of conferences where the person had a leadership position and listing of memberships and positions held in professional organizations. Finally, professional and civic awards are listed. Indexes provide listings of individuals by company or other organization name and also by geographical location. *Who's Who in Plastics Polymers* is now published in a limited edition of 1 000 copies. This edition will not be reprinted. To be sure of receiving your copy, please act now. Information on ordering follows sample pages on the reverse.
