Cognitive Movement Ecology Eliezer Gurarie,Tal Avgar,2024-02-09 At least since Darwin argued that the difference in cognitive abilities between animals and humans is one of degree and not of kind the study of animal cognition has been an active and dynamic subfield of behavioral sciences It has however been based almost entirely on experimental studies of animals in captivity and belongs as a field more snugly in the realm of Psychology or Ethology with relatively little application to understanding the behavior of animals in the wild Movement Ecology in contrast is a more recent branch of Ecology devoted almost entirely to the analysis of animal movements in the wild Technological developments allow for animals to be tracked in the wild in ever increasing numbers precision and duration Movement ecology has to some extent chased the data reflecting the practical need to analyze and interpret those data Much of the most important developments of recent decades are devoted to dealing with the trickier aspects of the statistical analysis of movement data which in their multidimensionality autocorrelation gappiness and measurement error and behavioral complexity pose no shortage of hairy statistical problems Canadian Journal of Fisheries and Aquatic Sciences ,2004-08 **Fish Behavior and Its Use in the Capture and Culture of Fishes** International Center for Living Aquatic Resources Management,1980-01-01 **Gale Environmental Sourcebook** ,1994 **Proceedings of the Gulf and Caribbean Fisheries Institute** Gulf and Caribbean Fisheries Institute,2008 *Traditional Marine Resource Management and Knowledge Information Bulletin* ,2004
