*Dynamics of Information Systems* Michael Hirsch, Panos M. Pardalos, Robert Murphey, 2010-04-11 Our understanding of information and information dynamics has outgrown classical information theory The theory does not account for the value or influence of information within the context of a system or network and does not explain how these properties might influence how information flows through and interacts with a system The invited chapters in this collection present new theories methods and applications that address some of these limitations Dynamics of Information Systems presents state of the art research explaining the importance of information in the evolution of a distributed or networked system This book presents techniques for measuring the value or significance of information within the context of a system Each chapter reveals a unique topic or perspective from experts in this exciting area of research These newly developed techniques have numerous applications including the detection of terrorist networks the design of highly functioning businesses and computer systems modeling the distributed sensory and control physiology of animals quantum entanglement and genome modeling multi robotic systems design as well as industrial and manufacturing safety

**Making World Development Work** Grégoire Leclerc, Charles A. S. Hall, 2007-06-16 The authors reexamine world development usually the province of economists as professionals trained in the natural sciences They show how we have and might use tested scientific and technical procedures and concepts as well as science itself to achieve much better results than what has been characteristic of the past Leclerc and Hall contend that to scholars with a scientific background the process of development and the economic logic behind it often look almost surrealistic The basic question at the foundation of this review is this Why should something so important as world development something capable of

absorbing such vast sums of money and of human goodwill something that impacts the people and the environment so much continue to be organized and planned using economic techniques and theories that are both unconfirmed experimentally and proven to have led to development failures
