Dyslexia Developing The Debate Key Debates In Educational Policy:

Dyslexia Julian Elliott, Rod Nicolson, 2016 Dyslexia is often presented as a clearly delineated condition that can be diagnosed on the basis of appropriate cognitive tests with corresponding forms on intervention. However, this approachable text explores the issues behind this assertion in bringing together leading figures in the field to debate dyslexia. Julian Elliott shows that understandings and usage of the dyslexia label vary substantially with little consensus or agreement and in putting forward his critique draws upon research in several disciplinary fields to demonstrate the irrationality of these arguments. Roderick I. Nicolson demonstrates that current approaches to understanding identification and support of dyslexia are catastrophically flawed in terms of their failure to consider the developmental nature of dyslexia. He develops two themes: first, that the underlying cause of dyslexia is delayed neural commitment for skills and neural circuits; and second, that the cause of the reading disability is the introduction of formal instruction before the dyslexic child's neural circuits for executive function are sufficiently developed. He argues that a more effective and cost-effective approach to identification and support involves assessment for dyslexia rather than of dyslexia. Elliott and Nicolson respond to the points each other raise before Andrew Davis investigates how far the key claims of Elliott and Nicolson can withstand close conceptual investigation and explores the inherent limitations of scientific research on this topic given the value and conceptual issues concerned.

Making a Difference in Education Robert Cassen, Sandra McNally, Anna Vignoles, 2015-04-24 What is working in education in the UK and what isn't? This book offers a highly readable guide to what the latest research says about improving young people's outcomes in pre-school, primary and secondary education. Never has this issue been more topical as the UK attempts to compete in the global economy against countries with increasingly educated and skilled work forces. The book discusses whether education policy has really been guided by the evidence and explores why the failings of Britain's educational system have been so resistant to change as well as the success stories that have emerged. **Making a Difference in Education** looks at schooling from early years to age 16 and entry into Further Education with a special focus on literacy, numeracy and IT. Reviewing a large body of research and paying particular attention to findings which are strong enough to guide policy, the authors examine teacher performance, school quality and accountability and the problematically large social gap that still exists in state school education today. Each chapter concludes with a summary of key findings and key policy requirements. As a comprehensive research review, **Making a Difference in Education** should be essential reading for faculty and students in education and social policy and of great interest to teachers and indeed to anyone who wants to know about the effectiveness of UK education policy and practice and where they should be going. **The Parliamentary Debates (Hansard)**.
