"E-Mobility". Formen von Elektromobilität Hofmann Johannes, 2015-05-29 Studienarbeit aus dem Jahr 2014 im Fachbereich VWL Verkehrswirtschaft Note 2,0 Hochschule Heilbronn Technik Wirtschaft Informatik Sprache Deutsch

Abstract E-Mobility auch bekannt als Elektromobilität ist heutzutage in aller Munde Denn das Thema Elektromobilität ist wichtiger als je zuvor Das heutige Auto mit seinem Verbrennungsmotor könnte in den nächsten Jahrzehnten vom Aussterben bedroht sein Die Vorkommen werden immer knapper und die Preise für Benzin und Diesel steigen stetig an Seit geraumer Zeit werden Elektroautos bzw Autos zur Unterstützung des Verbrennungsmotors mit einem Elektromotor ausgestattet Viele Menschen sind sich nicht schlüssig ob die Elektromobilität in Form des Elektroautos eine Zukunft hat oder ob es sich doch nur um einen Flop handelt Das Ziel dieser Arbeit ist es verschiedene Formen der Elektromobilität aufzuzeigen diese zu erläutern und am Ende ein persönliches Fazit zu ziehen

The Diffusion of E-Cars in the Austrian Market Alexander Zimm, 2013

Zusammenfassend kann man Elektromobilität beschreiben als jedes Fahrzeug das mit Strom aus der Steckdose betrieben wird Und obwohl der Terminus uns ein Gefühl von Innovation und Zukunftsvisionen gibt ist er doch seit einigen Jahrzehnten in unserer Gesellschaft vertreten wenn wir an die Elektrifizierung der Eisenbahn bzw an die Implementierung von Straßenbahn und U-Bahn denken Aber diesmal scheint es so als ob sich die neuen Formen der Mobilität in Form einer stillen Revolution manifestieren die auf unseren Alltag auf eine viel tiefgreifendere Weise als bisher verändern wird Diesmal müssen Automobilproduzenten ihr Produktportfolio anpassen um die Kohlendioxid-Emissionsziele zu erreichen nachdem zwar eine Steigerung der Effizienz von konventionellen Treibstoffen auf 30-40% bis 2020 geschätzt wird Roland Berger 2009 dies jedoch nicht ausreichen würde um die europäischen Emissionsziele von 95gCO₂/km bis 2025 zu erreichen EC 2011 Trotz der harten Zeiten für die Automobilindustrie aufgrund der Wirtschaftskrise in 2009 und den zukünftigen Herausforderungen gibt es ein riesiges Potential in diesem Markt mit der Chance einen Vorteil gegenüber der Konkurrenz in einem wachsenden Wirtschaftssektor zu etablieren Kooperationen zwischen Automobilproduzenten und anderen Industrien die nie zuvor zusammengearbeitet haben werden geschlossen eine ganzlich neue Infrastruktur muss implementiert werden Letztlich sieht sich auch der Import von Rohstoffen die wichtig für die Produktion von Elektroautos sind durch politische Instrumentalisierung mit zukünftigen Engpässen konfrontiert Ganderberger 2010 Nur einige Beispiele die einem veranschaulichen wie groß die Risiken in diesem Markt sind und doch gleichzeitig das riesige Potenzial dieses globalen Marktes aufzeigen der auf 19-57 Milliarden geschätzt wird Roland Berger 2009 In Österreich waren 2.600 Hybridautos sowie 146 Elektroautos auf den Straßen VC 2013 eine Zahl die das große Potenzial aufzeigt wenn man sie in Relation zu allen 4,3 Millionen zugelassenen Autos in Österreich setzt Im Zuge dieser Masterarbeit war es das Ziel die motivationalen Faktoren der

sterreichischen Konsumenten im Bezug auf die Adaption von Elektroautos mithilfe von Rogers Diffusion of Innovation Modell zu erfassen. Dieses beschreibt fünf Faktoren die maßgeblich entscheidend für den Erfolg einer Innovation sind (Rogers 2003). Die Daten wurden mithilfe eines Fragebogens mit einer geschlechtsbalancierten geschachtelten Stichprobe unter Autofahrern zwischen 18-65 Jahren in Wien erhoben (N=102), wobei die Ergebnisse im Anschluss mit einer Faktorenanalyse untersucht wurden. Zusammenfassend lässt sich sagen, dass fünf dominante Faktoren bei Elektroautos entdeckt wurden: Fahrvergnügen, Bedienung, Infrastruktur, Familie und Basis, wobei die meisten Attribute von Elektroautos ähnlich wie bei konventionellen Autos wahrgenommen wurden. Rogers Faktor Relativer Vorteil war nur teilweise prevalent, da die Literatur auf hohe Anschaffungskosten und einen geringen umfassenden Wissensstand der Konsumenten schließen lie. Die Kompatibilität mit den eigenen Werten wurde in Form der Subjektiven und Sozialen Norm gefunden. Geringe Komplexität der Innovation konnte durch den Faktor Leichtigkeit der Bedienung gefunden werden, und die Möglichkeit das Produkt ausprobieren zu können trat sogar als eigener Faktor hervor. Die Häufigkeit das Produkt zu sehen konnte in Zuge dieser Studie nicht entdeckt werden und untermauert die Tatsache, dass derzeit kaum Elektroautos auf österreichischen Straßen sind bzw. gesehen werden. Letztlich lässt sich noch sagen, dass ein Item starkes Interesse an einem Elektroauto als Zweitwagen erkennen lie, dies jedoch weiterer Nachforschung bedarf. Eine breite Auswahl an Elektromobilen war den Konsumenten ebenfalls wichtig, und es stellte sich heraus, dass die grundsätzlichen Erwartungen von einem Elektroauto mehr auf den Preis bezogen waren als bei einem konventionellen Auto. Ein Ergebnis, das auch in den Studien von CAMA 2011 und IMAS 2013 bestätigt werden konnte. In a nutshell, e-mobility can be summarized as any vehicle that is running on plug-in electricity (FIA 2011). And although the term gives people a feeling of innovation, it has been around for several decades when one thinks of the electrification of locomotives or the introduction of trams and metros. But this time it seems like the new ways of mobility are coming in form of a silent revolution that is emerging on a widespread basis and influence our everyday life even more significantly. This time automobile producers need to change their product portfolio to achieve the CO₂ emission targets, since increasing the efficiency of conventional fossil fuel engines is predicted to generate emission reductions of 30-40% by 2020 (Roland Berger 2009), a figure that will not be sufficient to reach the European target of 95 g/km in 2025 (EC 2011). Despite harsh times for the car industry during the economic crisis in 2009 and the challenges ahead, there is huge potential in this market and the opportunity to establish a competitive advantage in an emerging business sector. Cooperations between car manufacturers and other industries are formed that have never been working together before, a completely new infrastructure needs to be set up, and natural resources that are important for the manufacturing of electric vehicles face bottlenecks due to political instrumentalization (Gandenberger 2010). Just a few examples that give a grasp of how big the risks for this market are, yet offer a huge potential in a new global market whose value is estimated at 19.57bn (Roland Berger 2009). In Austria, there were around 2,600 Hybrid Cars and 146 Battery Electric Vehicles on the streets in 2008 (VC 2013), a figure that shows the vast

potential when put into comparison to the fleet of conventional passenger cars of 4.3 million vehicles. In the course of this thesis the goal was to identify the motivational factors of the Austrian consumer with regard to the adoption of electric vehicles based on Rogers' Diffusion of Innovation Model (DoI) that contains five decisive factors. These are said to constitute the requirements for a successful innovation (Rogers, 2003). The data was collected with the help of a gender balanced questionnaire with a stratified sampling that was distributed across Vienna among car drivers between 18 and 65 years (N = 102) and the results were analyzed with a principal component analysis (PCA). In conclusion, the following five factors emerged most dominantly for e-cars: driving operation, infrastructure, family, and basic, while most of the attributes of electric vehicles were perceived to be similar to conventional cars. Rogers' dimension relative advantage was only partly prevalent since the literature revealed high costs and low in-depth information of the consumer. Compatibility with people's existing values was found in the subjective and social norm. Reduced complexity could be indicated by the factor ease of use, and trialability was discovered as a factor directly. Observability could not be found within the PCA, which underlines the fact that there are currently very few electric vehicles on the street that can be observed in Austria. Lastly, one response indicated strong interest for an EV as a second car, which requires further research. A broad choice of electric vehicles was important to consumers, and it turned out that the basic expectations from an e-car were more price sensitive, a result that could also be confirmed in the studies by CAMA (2011) and IMAS (2013).

The electric car. A future model for everyone in Germany?

Lisa von Wachter, 2022-03-04. Pre-University Paper from the year 2018 in the subject Electrotechnology, grade 1.3, language English, abstract. One million electric vehicles by 2020 was the federal government's goal. So far, only 53,861 purely electric cars are driving in Germany as of January 1st, 2018. However, manufacturers are having to rely more and more on electrical engineering in order not to exceed the upper limit of the permitted CO₂ emissions for cars. This upper limit is further reduced by politicians in order to reduce CO₂ emissions in traffic. Cars with internal combustion engines will not be able to meet these future values. The importance of electric cars in the future is therefore a topic that is being discussed more and more frequently in the media, in politics, and in business. In order to advance the energy transition, Lienkamp calls for an urgent rethinking of car use. With the statement "Because I go on vacation once a year, I don't have an Airbus in the garden," he tries to convince his listeners that an electric car does not have to drive 1000 km at a time if it is primarily used for the city. The key question in my seminar paper is whether the electric car with its advantages and disadvantages will be a future model for everyone in Germany. At the beginning, I would like to give an overview of the topic of electric cars and describe the current situation in Germany. Among other things, I check the sustainability of the electric cars. Are they really as ecological as the proponents always say? Then I deal with the important topic of range, which is often described as insufficient. I will also explain the situation of the charging infrastructure today and in the future. Is the charging infrastructure already sufficient, and what needs to change in the future? The question of cost plays a relevant role and is an important decision point for many buyers.

When will electric cars cost as much or even less than cars with internal combustion engines Who will switch to an electric car and when in the future I will deal with these questions and others in the topic of future viability of the electric car The content of my investigation is limited to electromobility in the passenger car sector In addition I will only go into the development the sensible use of pure electric cars and their future prospects in Germany and leave out global change Hydrogen vehicles and hybrid vehicles are not taken into account

Electric Mobility in View of Green Growth Sarah Wolf, Steffen Fürst, Andreas Geiges, Gesine A. Steudle, Jette von Postel, Carlo Jaeger, 2018 *Electric Mobility as Innovation - Influential Factors on the Consumer Adoption of Electric Cars in Austria* Eva Gabriel, 2013 Elektroautos haben bereits in der Vergangenheit das Straßenbild geprägt und in den letzten Jahren aufgrund steigender Treibstoffpreise abnehmender Erdölreserven und zunehmender Umweltverschmutzung an Bedeutung gewonnen Die vorliegende Arbeit widmet sich den Einflussfaktoren der KonsumentenInnenakzeptanz von Elektromobilen Anhand zweier bedeutender Innovationsmodellen ist ein konzeptionelles Rahmenwerk entstanden welches sich explizit mit der KonsumentenInnenakzeptanz auf gesellschaftlicher Ebene beschäftigt Dieses Rahmenwerk wird in weiterer Folge auf den Elektroautobereich in Österreich angewendet Elektroautos stellen eine diskontinuierliche Innovation dar wobei diese nicht nur als Produkt in Erscheinung tritt sondern auch in sozialer und politischer Hinsicht vorzufinden ist Darüber hinaus gibt es individuelle und gesellschaftliche Einflussfaktoren Hierbei liegt der Fokus auf den gesellschaftlichen Einflussfaktoren in Österreich Im Detail können diese Einflüsse auf vier Dimensionen vorgefunden werden Zunächst betrifft dies die Innovation in Bezug auf die Innovationsentscheidung und den Grad der Diskontinuität Weiters umfasst es die KonsumentenInnen und die notwendige Änderung ihrer Verhaltensweisen deren Originalität und deren Wahrnehmung der Innovationsattribute Ferner ist die Kommunikation und die verwendeten Kanäle ausschlaggebend die sowohl Massenmedien Internet und zwischenmenschliche Verständigung umfassen Zuletzt beeinflussen die kulturellen Eigenheiten die Annahme von Innovationen Es sind bei allen vier Komponenten auch die Einflüsse untereinander zu berücksichtigen Electric cars dominated the landscape several decades ago and have regained interest during the last couple of years due to ever increasing petrol prices the depletion of crude oil and rising concern about environmental pollution The thesis on hand deals with the influential factors on the consumer adoption of e cars in Austria By reviewing two prominent innovation adoption models a conceptual system adoption framework is established which identifies theoretical impacts on adoption In turn the framework is applied to the adoption of electric cars in Austria Specifically it highlights the fact that electric vehicles are an innovation of a discontinuous nature in product social and political innovation formats Furthermore adoption influences exist at the individual and system level Here the emphasis is on the system level with Austria as the system under review The particular influences on e car adoption can be found on four dimensions Firstly the nature of the innovation in terms of its innovation decision type and degree of discontinuity is vital Secondly the consumers encompassing the required behavioural changes the individual innovativeness and the awareness of

innovation attributes influence adoption Thirdly communication and the employed channels either being mass media the Internet or interpersonal and finally cultural particularities have an impact on consumer adoption However all four dimensions do not only exist in isolation but also influence each other

Decoding **E Mobility Formen Von Elektromobilit T**: Revealing the Captivating Potential of Verbal Expression

In a period characterized by interconnectedness and an insatiable thirst for knowledge, the captivating potential of verbal expression has emerged as a formidable force. Its ability to evoke sentiments, stimulate introspection, and incite profound transformations is genuinely awe-inspiring. Within the pages of "**E Mobility Formen Von Elektromobilit T**," a mesmerizing literary creation penned by way of a celebrated wordsmith, readers attempt an enlightening odyssey, unraveling the intricate significance of language and its enduring effect on our lives. In this appraisal, we shall explore the book's central themes, evaluate its distinctive writing style, and gauge its pervasive influence on the hearts and minds of its readership.
