## **Dynamically Reconfigurable Systems Architectures Design Methods And Applications:**

Dynamically Reconfigurable Systems Marco Platzner, Norbert Wehn, 2010-03-10 Dynamically Reconfigurable Systems is the first ever to focus on the emerging field of Dynamically Reconfigurable Computing Systems While programmable logic and design time configurability are well elaborated and covered by various texts this book presents a unique overview over the state of the art and recent results for dynamic and run time reconfigurable computing systems Reconfigurable hardware is not only of utmost importance for large manufacturers and vendors of microelectronic devices and systems but also a very attractive technology for smaller and medium sized companies Hence Dynamically Reconfigurable Systems also addresses researchers and engineers actively working in the field and provides them with information on the newest developments and trends in dynamic and run time reconfigurable systems

**Reconfigurable Computing Systems Engineering** Lev Kirischian, 2017-12-19 Reconfigurable Computing Systems Engineering Virtualization of Computing Architecture describes the organization of reconfigurable computing system RCS architecture and discusses the pros and cons of different RCS architecture implementations Providing a solid understanding of RCS technology and where it s most effective this book Details the architecture organization of RCS platforms for application specific workloads Covers the process of the architectural synthesis of hardware components for system on chip SoC for the RCS Explores the virtualization of RCS architecture from the system and on chip levels Presents methodologies for RCS architecture run time integration according to mode of operation and rapid adaptation to changes of multi parametric constraints Includes illustrative examples case studies homework problems and references to important literature A solutions manual is available with qualifying course adoption Reconfigurable Computing Systems Engineering Virtualization of Computing Architecture offers a complete road map to the synthesis of RCS architecture exposing hardware design engineers system architects and students specializing in designing FPGA based embedded systems to novel concepts in RCS architecture organization and virtualization

**Reconfigurable System Design and Verification** Pao-Ann Hsiung, Marco D. Santambrogio, Chun-Hsian Huang, 2018-10-08 Reconfigurable systems have pervaded nearly all fields of computation and will continue to do so for the foreseeable future Reconfigurable System Design and Verification provides a compendium of design and verification techniques for reconfigurable systems allowing you to quickly search for a technique and determine if it is appropriate to the task at hand It bridges the gap between the need for reconfigurable computing education and the burgeoning development of numerous different techniques in the design and verification of reconfigurable systems in various application domains The text explains topics in such a way that they can be immediately grasped and put into practice It starts with an overview of reconfigurable computing architectures and platforms and demonstrates how to develop reconfigurable systems This sets up the discussion of the hardware software and system techniques that form the core of the text The authors classify design and verification techniques into primary and secondary categories allowing the appropriate ones to be easily located and

compared The techniques discussed range from system modeling and system level design to co simulation and formal verification Case studies illustrating real world applications detailed explanations of complex algorithms and self explaining illustrations add depth to the presentation Comprehensively covering all techniques related to the hardware software design and verification of reconfigurable systems this book provides a single source for information that otherwise would have been dispersed among the literature making it very difficult to search compare and select the technique most suitable The authors do it all for you making it easy to find the techniques that fit your system requirements without having to surf the net or digital libraries to find the candidate techniques and compare them yourself

**Design Methodology for Intelligent Technical Systems** Jürgen Gausemeier, Franz Josef Rammig, Wilhelm Schäfer, 2014-01-28 Intelligent technical systems which combine mechanical electrical and software engineering with control engineering and advanced mathematics go far beyond the state of the art in mechatronics and open up fascinating perspectives Among these systems are so called self optimizing systems which are able to adapt their behavior autonomously and flexibly to changing operating conditions Self optimizing systems create high value for example in terms of energy and resource efficiency as well as reliability The Collaborative Research Center 614 Self optimizing Concepts and Structures in Mechanical Engineering pursued the long term aim to open up the active paradigm of self optimization for mechanical engineering and to enable others to develop self optimizing systems This book is directed to researchers and practitioners alike It provides a design methodology for the development of self optimizing systems consisting of a reference process methods and tools The reference process is divided into two phases the domain spanning conceptual design and the domain specific design and development For the conceptual design a holistic approach is provided Domain specific methods and tools developed especially for the design and development of self optimizing systems are described and illustrated by application examples This book will enable the reader to identify the potential for self optimization and to develop self optimizing systems independently

**Software Product-Family Engineering** Frank van der Linden, 2004-05-24 This book constitutes the thoroughly refereed post proceedings of the 5th International Workshop on Product Family Engineering PFE 2003 held in Siena Italy in November 2003 The 36 revised full papers presented together with an introductory overview and 3 keynote presentations were carefully selected during two rounds of reviewing and improvement The papers are organized in topical sections on variation mechanisms requirements analysis and management product derivation transition to family development industrial experience evolution and decision and derivation

**Field-Programmable Logic and Applications** Gordon Brebner, 2001-08-15 This book constitutes the refereed proceedings of the 11th International Conference on Field Programmable Logic and Application FPL 2001 held in Belfast Northern Ireland UK in August 2001 The 56 revised full papers and 15 short papers presented were carefully reviewed and selected from a total of 117 submissions The book offers topical sections on architectural framework place and route architecture DSP synthesis encryption runtime reconfiguration graphics and vision networking processor interaction

applications methodology loops and systolic image processing faults and arithmetic      *Functional Verification of Dynamically Reconfigurable FPGA-based Systems* Lingkan Gong, Oliver Diessel, 2014-10-08 This book analyzes the challenges in verifying Dynamically Reconfigurable Systems DRS with respect to the user design and the physical implementation of such systems The authors describe the use of a simulation only layer to emulate the behavior of target FPGAs and accurately model the characteristic features of reconfiguration Readers are enabled with this simulation only layer to maintain verification productivity by abstracting away the physical details of the FPGA fabric Two implementations of the simulation only layer are included Extended Re Channel is a System C library that can be used to check DRS designs at a high level ReSim is a library to support RTL simulation of a DRS reconfiguring both its logic and state Through a number of case studies the authors demonstrate how their approach integrates seamlessly with existing mainstream DRS design flows and with well established verification methodologies such as top down modeling and coverage driven verification

Srinivasan, 1988 Computer systems that are capable of undergoing changes in the semantics or the interconnection of their modules in a dynamic way called dynamic reconfiguration are considered The problems that must be addressed to change the semantics of a module are discussed The change to the semantics of a module or their interconnection can be based on local information global information or a combination of both Ways to effect changes when conflicts exist between local and global information are also discussed Algorithms for reconfiguring the modules when data dependency constraints are present have been developed Changing the semantics or the interconnection structure of a module may induce changes in other modules Systematic ways to deduce induced changes have been developed Protocols have also been developed for communicating reconfiguration information between modules A methodology based on the dataflow principles has been devised for designing reconfigurable systems The nodes in the dataflow graph can store state information These nodes are used to represent global and local controllers The design of a sample operating system has been outlined using the dataflow methodology Since interprocess communication is one of the key issues in reconfiguration a multiprocessor architecture has been developed to support this A separate synchronization memory is used in the multiprocessor for storing status information process table join table and other data structures needed for interprocess communication Simulation results

show that fast interprocess communication is achievable with the synchronizing memory The report contains four chapters The issues in reconfiguration and some applications are described in Chapter 1 The steps that must be taken to reconfigure a system are outlined in Chapter 2 It is based on an extended dataflow methodology which has been published as a paper The application of the methodology to design a distributed operating system is described in Chapter 3 A system architecture capable of supporting reconfiguration is also shown in Chapter 3 The architecture support for fast interprocess communication IPC is described in Chapter 4 Dynamic memory management and process management for the parallel execution of Prolog programs on the proposed system architecture are used to illustrate the fast IPC
