

E1005

indicator

Description

General

This specification describes the E1005 indicator, capable of stand-alone operation, or of integration into a larger system via serial interface.

It is a microprocessor-based industrial weighing system with up to 100,000 displayed increments for analysing, displaying, storing and transmitting gross and net weight information.

Up to four analogue load cells to be connected with the indicator. The E1005 can be matched to almost any load cell system to achieve optimum accuracy, stability and repeatability.

The indicator can control its surrounding process using configurable outputs.

Configurable Features

The E1005 features a keyboard which allows any of the following functions to be configured during commissioning:

- Sensitivity to weight signal
- Scale capacity
- Number of divisions and increment size
- Weighing Unit
- Zero / back balance
- Decimal marker type - point or comma
- Position of decimal marker
- Filtering parameters

- Five points for linearity correction to ensure maximum accuracy
- Tare availability
- Time and date
- User-definable serial output strings
- Grand total information
- Scale ID number
- I/O operation

All these characteristics are stored in non-volatile memory so that once the ideal parameters for any given weighing system are established they can be retained with certainty for the future.

Once the scale is set up as required, a calibration report can be printed showing weighing details (useful for the installation engineer). This allows the state of the system to be monitored.

One PLU is provided for simple totalling and storage of user-defined parameters.
