(1) Introduction

General medical officers assigned to ships and squadrons of the surface fleet are privileged to be a part of the most exciting part of the United States Navy. The surface force is the most traditional of all the branches of the naval service, and with the emergence of the doctrine of From the Sea, the surface force is the leading edge of the 21st century Navy.

(2) Organization

The surface force consists of all those ships not assigned to the submarine force or to the naval air force (i.e., aircraft carriers). Broadly speaking there are three categories of surface ships: combatants (shooters), amphibious assault ships (gators), and logistical support ships.

- **Combatants**

Aegis guided missile cruisers (CG), Arleigh Burke guided missile destroyers (DDG), Spruance destroyers (DD), and fast frigates (FFG) make up the surface combatants. Most of these ships are fast and heavily armed to provide air cover for aircraft carriers or hunt submarines, and bristling with the latest in computerized weapons systems. Their crew size is small (250-450 men) so most of these ships have independent duty corpsmen (IDCs) to provide medical care. Groups of ships are organized under the command of a destroyer squadron commanded by a Commodore, who is usually a captain or an admiral. Medical officers are assigned to regional surface support groups (RSG) usually commanded by a one star admiral who has responsibility for providing support to ships from several squadrons. It is the group medical officer's responsibility to teach and provide oversight to the corpsmen assigned to the cruisers and destroyers.

- **Amphibious Assault Ships**

- (a) The amphibious assault ships are the heart of the Navy's current focus on Littoral Warfare. These ships include the Casualty Receiving and Treatment Ships (CRTS) of the Navy, the LHDs (landing ship helicopter dock), and LHAs (landing ship helicopter assault). With their 4 operating rooms, 17 ICU beds, 48 bed ward, lab, x-ray, and blood bank capabilities, they are capable of receiving mass casualties and supporting fleet surgical teams. LPDs (landing platform dock) and LSDs (landing ship dock) are configured to launch LCACs and other assault craft from their well decks to carry Marines and their equipment ashore. LPDs, LSDs (41 class), and LCCs, while carrying a medical officer, have no ICU/post op beds and no blood bank capability. Ward beds number 13, 9, and 20 respectively.
