 Hardiman,2020-04-15 A genotype is essentially an organism s full hereditary information which is obtained from its parents A  
 phenotype is an organism s actual observed physical and behavioral properties These may include traits such as morphology  
 size height eye color metabolism etc One of the pressing challenges in computational and systems biology is genotype to  
 phenotype prediction This is challenging given the amount of data generated by modern Omics technologies This Big Data is  
 so large and complex that traditional data processing applications are not up to the task Challenges arise in collection  
 analysis mining sharing transfer visualization archiving and integration of these data In this Special Issue there is a focus on  
 the systems level analysis of Omics data recent developments in gene ontology annotation and advances in biological  
 pathways and network biology The integration of Omics data with clinical and biomedical data using machine learning is  
 explored This Special Issue covers new methodologies in the context of gene environment interactions tissue specific gene
