

## 7<sup>th</sup> Grade Science-Chapter 11 Test Study Guide: Human Genetics and Genetic Technology

### LESSON 11.1

Carrier-a person who has one recessive allele and one dominant allele for a trait  
The carrier will not have the trait if the characteristic is determined by a recessive allele.

Sex chromosomes-the chromosomes that carry the genes that determine the sex (gender) of the individual, as well as other genes (XX-female; XY-male)

The likelihood a couple will have a boy vs. girl is 50%/50%.

Sex-linked gene-a gene found on the X or Y chromosome

Some traits are controlled by a single gene with only two alleles. EX: widow's peak and dimpled chin  
Some traits are controlled by a single gene with multiple alleles. EX: human blood type  
Some traits are controlled by multiple genes. EX: human height

You must be able to use a Punnett Square to determine the probability of passing on sex-linked characteristics. See pgs 417 and 420 in the textbook for sample problems.

### LESSON 11.2

Genetic disorder-an abnormal condition a person inherits through genes or chromosomes  
Some genetic disorders are caused by gene mutations in the DNA; others are caused by a change in the overall structure or number of chromosomes.

EX: cystic fibrosis and sick-cell disease are caused by a mutation in one's genes/DNA  
EX: hemophilia-caused by a recessive allele on the X chromosomes (sex-linked)  
EX: Down's syndrome-caused by the addition of an extra chromosome #21

Doctors use pedigrees, karyotypes, and genetic testing to trace and diagnose genetic disorders.  
People with genetic disorders are helped through medical care, education, and job training.  
Genetic counseling helps couples understand their chances of having children with a genetic disorder.

Pedigree-a chart or family tree that tracks which members of a family have a certain trait

Karyotype-a picture of all the chromosomes in a person's cell (23 pairs = 46 total chromosomes)

You must be able to draw and analyze a simple pedigree, given example information. See pgs 421 and 432 for textbook samples.

### LESSON 11.3

Selective breeding, cloning, and genetic engineering are three different methods for developing organisms with desired traits.

Selective breeding-process of selecting organisms with desired traits to be parents of the next generation. Ex: plants and animals can sometimes be bred in this way to get the desired traits in the offspring.
