Geographic information science GISc has established itself as a collaborative information processing scheme that is increasing in popularity. Yet this interdisciplinary and/or transdisciplinary system is still somewhat misunderstood. This book talks about some of the GISc domains encompassing students, researchers, and common users. Chapters focus on important aspects of GISc, keeping in mind the processing capability of GIS along with the mathematics and formulae involved in getting each solution. The book has one introductory and eight main chapters divided into five sections. The first section is more general and focuses on what GISc is and its relation to GIS and Geography; the second is about location analytics and modeling; the third on remote sensing data analysis; the fourth on big data and augmented reality; and finally, the fifth looks over volunteered geographic information.

Modelling Scale in Geographical Information Science Nicholas Tate, Peter M. Atkinson, 2001-12-05. Scale has long been a fundamental concept in geography. Its importance is emphasised in geographical information science (GIScience) where the computational domain necessitates the rigorous definition and handling of scale. Geographical information systems are now used in almost every walk of life, but scale is often handled poorly in such systems. *Modelling Scale in Geographical Information Science* is written by an international team of contributors drawn from both industry and academia and considers models and methods of scaling spatial data in both human and physical systems. Divided into three sections to give a balanced coverage of the key problems, tools, and models associated with scale: Fractal Models, The Modifiable Areal Unit Problem, Changing the Scale of Measurement. This book is an essential read for all GIScience researchers, advanced students, and practitioners who want to delve more deeply into the scale issues of the spatial data and spatial models that form the basis of their analyses.

Research Trends in Geographic Information Science Gerhard Navratil, 2009-06-17. In June/July 2008, the Institute for Geoinformation and Cartography at the Vienna University of Technology organized a scientific colloquium in this city where 15 well-known scientists presented their ideas on research for the upcoming decade. This book contains papers prepared by the participants as well as by other researchers. The eighteen papers in this book reflect the opinion of a core group of geoinformation scientists about future research topics. Dealing with these topics poses multiple research questions for the coming years.
