Genetic Algorithms And Investment Strategies:

Genetic Algorithms and Investment Strategies Richard J. Bauer, 1994-03-31 When you combine nature's efficiency and the computer's speed the financial possibilities are almost limitless Today's traders and investment analysts require faster sleeker weaponry in today's ruthless financial marketplace Battles are now waged at computer speed with skirmishes lasting not days or weeks but mere hours In his series of influential articles Richard Bauer has shown why these professionals must add new computerized decision making tools to their arsenal if they are to succeed In *Genetic Algorithms and Investment Strategies* he uniquely focuses on the most powerful weapon of all revealing how the speed power and flexibility of GAs can help them consistently devise winning investment strategies The only book to demonstrate how GAs can work effectively in the world of finance it first describes the biological and historical bases of GAs as well as other computerized approaches such as neural networks and chaos theory It goes on to compare their uses advantages and overall superiority of GAs In subsequently presenting a basic optimization problem *Genetic Algorithms and Investment Strategies* outlines the essential steps involved in using a GA and shows how it mimics nature's evolutionary process by moving quickly toward a near optimal solution Introduced to advanced variations of essential GA procedures readers soon learn how GAs can be used to Solve large complex problems and smaller sets of problems Serve the needs of traders with widely different investment philosophies Develop sound market timing trading rules in the stock and bond markets Select profitable individual stocks and bonds Devise powerful portfolio management systems Complete with information on relevant software programs a glossary of GA terminology and an extensive bibliography covering computerized approaches and market timing *Genetic Algorithms and Investment Strategies* unveils in clear nontechnical language a remarkably efficient strategic decision making process that when imaginatively used enables traders and investment analysts to reap significant financial rewards

Use of Genetic Algorithms for Optimal Investment Strategies Fan Zhang, 2013 In this project a genetic algorithm GA is used in the development of investment strategies to decide the optimum asset allocations that back up a portfolio of term insurance contracts and the re balancing strategy to respond to the changing financial markets such as change in interest rates and mortality experience The objective function used as the target to be maximized in GA allows us to accommodate three objectives that should be of interest to the management in insurance companies The three objectives under consideration are maximizing the total value of wealth at the end of the period minimizing the variance of the total value of the wealth across the simulated interest rate scenarios and achieving consistent returns on the portfolio from year to year One objective may be in conflict with another and GA tries to find a solution among the large searching space of all the solutions that favors a particular objective as specified by the user while not worsening other objectives too much Duration matching a popular approach to manage risks underlying the traditional life insurance portfolios is used as a benchmark to examine the effectiveness of the strategies obtained through the use of genetic algorithms Experiments are conducted to compare the

performance of the investment strategy proposed by the genetic algorithm to the duration matching strategy in terms of the different objectives under the testing scenarios The results from the experiments successfully illustrate that with the help of GA we are able to find a strategy very similar to the strategy from duration matching We are also able to find other strategies that could outperform duration matching in terms of some of the desired objectives and are robust in the tested changing environment of interest rate and mortality

Evolutionary Algorithms in Management Applications Jörg

Biethahn, Volker Nissen, 2012-12-06 Evolutionary Algorithms EA are powerful search and optimisation techniques inspired by the mechanisms of natural evolution They imitate on an abstract level biological principles such as a population based approach the inheritance of information the variation of information via crossover mutation and the selection of individuals based on fitness The most well known class of EA are Genetic Algorithms GA which have received much attention not only in the scientific community lately Other variants of EA in particular Genetic Programming Evolution Strategies and Evolutionary Programming are less popular though very powerful too Traditionally most practical applications of EA have appeared in the technical sector Management problems for a long time have been a rather neglected field of EA research This is surprising since the great potential of evolutionary approaches for the business and economics domain was recognised in pioneering publications quite a while ago John Holland for instance in his seminal book *Adaptation in Natural and Artificial Systems* The University of Michigan Press 1975 identified economics as one of the prime targets for a theory of adaptation as formalised in his reproductive plans later called Genetic Algorithms

Natural Computing in Computational Finance Anthony Brabazon, Michael O'Neill, 2009-01-30 Recent years have seen the widespread application of Natural Computing algorithms broadly defined in this context as computer algorithms whose design draws inspiration from phenomena in the natural world for the purposes of financial modelling and optimisation A related stream of work has also seen the application of learning mechanisms drawn from Natural Computing algorithms for the purposes of agent based modelling in finance and economics In this book we have collected a series of chapters which illustrate these two faces of Natural Computing The first part of the book illustrates how algorithms inspired by the natural world can be used as problem solvers to uncover and optimise financial models The second part of the book examines a number agent based simulations of financial systems This book follows on from Natural Computing in Computational Finance Volume 100 in Springer's Studies in Computational Intelligence series which in turn arose from the success of EvoFIN 2007 the very first European Workshop on Evolutionary Computation in Finance Economics held in Valencia Spain in April 2007
